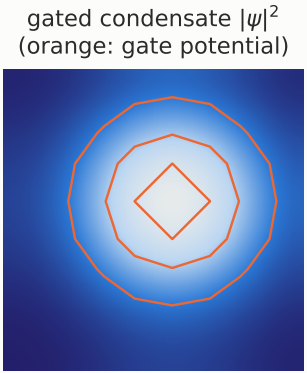
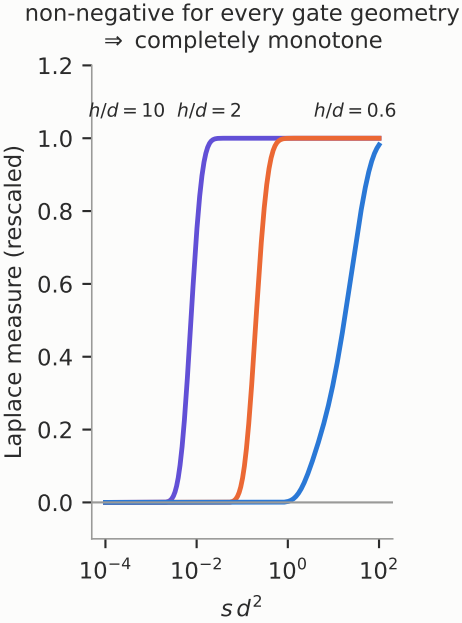
top gate (grounded, $z = +h_1$)
image charges, alternating sign,
period $P = 2(h_1 + h_2)$
hole layer
exciton: d
electron layer
bottom gate (grounded, $z = -h_2$)



gated condensate $|\psi|^2$
(orange: gate potential)



non-negative for every gate geometry
⇒ completely monotone
$h/d = 10$
$h/d = 2$
$h/d = 0.6$
